

Bullet Drop Prefab

Image:

Uses:

This prefab can be used for bullet item drops.

Features/Functions:

This prefab contains a sprite renderer to display the image of the sprite. The sprite's image also doesn't blur/distort when made larger or smaller. It also includes a "box collider 2D" component, so that the player can interact with the item. The "is trigger" box is checked so that other enemies on the screen won't collide with the prefab in the game.

Example of prefab being used:
